Rising Salt Intake Predisposes Locals to Hypertension

Hypertension is a serious public health problem due to its prevalence and aetiological significance for stroke, myocardial infarction, heart failure, and kidney disease. The most important modifiable environmental risk factors for hypertension include high salt intake, low potassium intake from fruits and vegetables, obesity, alcohol intake, stress and low physical activity.

Contrary to common perception, surveys conducted by the CUHK Faculty of Medicine indicate that salt intake in Hong Kong is on the rise and much higher than WHO recommendations. The organization recommends adults to reduce their daily salt intake from 9–12 grams to not more than 5–6 grams.

Chinese are particularly susceptible to dietary salt-induced hypertension because

they do not have an efficient mechanism to facilitate the renal excretion of sodium. In response to an increase in dietary salt intake, the kidney normally synthesizes dopamine to inhibit sodium reabsorption and induce relaxation of blood vessels. This response, however, is not seen in Chinese. Salt-induced high blood pressure may be reversible in its early stage and before structural changes occur in blood vessels.

Reducing salt intake and optimizing other dietary and lifestyle factors will lower the risk of hypertension.

The Faculty of Medicine advises the public to pay more attention to the sodium content of processed foods from which 75 to 80 per cent of total salt intake is derived. Patients with hypertension must undergo regular follow-ups and treatment.

CUHK's First Course on Bone Anchored Hearing Aid

The Department of Surgery and the Institute of Human Communicative Research of the Faculty of Medicine jointly organized the University's inaugural Bone Anchored Hearing Aid (BAHA) Course on 30th April. The course covered the repertoire of osseointegration concepts, surgical techniques, as well as potential complications and management. The course was sponsored by Entific Medical Systems SE.

Besides attending lectures, the 28 participants had the chance to learn first-hand about the unique BAHA experiences of four very different clients. There was also a workshop wherein participants learnt how to elegantly perform BAHA surgery on freshly prepared pig's skulls.

The course instructors were Prof. Michael Tong, Dr. Gordon Soo, Dr. Willis Tsang, Ms. Wong Yim Mui, and Mr. Johnnes Mak of the CUHK Faculty of Medicine, and Mr. David Proops of Queen Elizabeth Hospital, Birmingham, and Dr. Sigfrid Soli of the House Ear Institute, Los Angeles.

CUHK Graduates Highly Employable, Survey Reveals

The employment rate and salary level of 2004 CUHK graduates are very good according to a graduate employment survey conducted by the Career Planning and Development Centre of the Office of Student Affairs of the University. As at the end of 2004, 97.5 per cent of graduates were either employed or pursuing further studies. The average monthly salary of those employed was HK\$13,628, and HK\$11,266, if MB ChB graduates were excluded. This represents a 5.9 per cent increase from 2003. The highest salary earner was a medical graduate boasting HK\$65,000 a month. On average, each respondent had around 2.3 job offers.

The survey was carried out from

November to December 2004 by means of questionnaires and telephone interviews. The 2,474 respondents encompassed full-time, first-degree graduates of 2004 and MB ChB graduates of 2003.

Most graduates joined the commerce and industry sector (75.9 per cent), followed by social and public organizations (12.4 per cent), education (9.9 per cent), and government (1.9 per cent). The top six career fields were computer engineering and IT/eBusiness, accounting/auditing, administration/management, banking and finance, sales and marketing, and medical and health care. Up to 93.2 per cent expressed satisfaction with their current jobs.

also won the Best Presentation Award of the Young Investigator's Award. Ms. Wong Yee-man, an M.Phil. student from JCBME, was awarded the Young Investigator Encouragement Award for her paper 'The Aging Effect on the Characteristic of Photoplethysmogram Waveform'. CUHK Aviation Policy Experts on Privatization of Airport Authority

The Aviation Policy and Research Centre of the University has recently released its study on the 'Partial Privatization of the Airport Authority'. The press conference was hosted by Prof. Japhet Law, director of the centre, Prof. Michael Fung, and Dr. C.K. Law, associate directors of the centre, on 19th May 2005 at the CUHK MBA Town Centre in Central. The study was conducted in response to a consultation paper on the subject released by the Economic Development and Labour

Bureau of the HKSAR Government.

Based on the findings of the study, the centre believes that the case for the privatization of the Airport Authority does not exist at this time or in the foreseeable future. It suggests exploring less disruptive and more direct approaches to raise efficiency in the management of the Airport Authority before resorting to privatization. And given Hong Kong's improved outlook, there is no longer need for immediate or medium term fixes to the government's financial position.

香港人吃鹽過多

高血壓會引致中風、心肌梗塞、心衰竭和腎病等嚴重疾患，估計全球超過四分之一的人口有高血壓，二十年後的比率更會上升至近三成。

預防高血壓的重要而簡單方法就是減少攝取鹽，但本校醫學院的研究發現，香港成年人的鹽攝取量在過去十二年急劇上升，比世界很多地方都要高，由九十年代的每日八克增至二零零二年的每日九點九克；而同期港人食用蔬

果卻明顯減少，令體內鉀水平偏低，亦可引致高血壓。最棘手的是，中大研究人員發現華人缺少了將鈉有效排出體外的機能，更容易有高血壓。

他們建議市民減少吃鹽和高脂肪食物，減少飲酒，多吃蔬果和加強運動。由於香港人每天攝取的鹽份，近八成來自加工食物，食用前要特別留意其鈉含量，而高血壓患者更要定期覆診和接受治療。

政府宜延遲機管局私營化

本校航空政策研究中心認為特區政府在短期至中期都沒有龐大的財政壓力，並不需要於現在或可見的未來將機場管理局私營化。

航空業對香港經濟貢獻重大，約佔本地生產總值一成，赤鱘角機場亦是香港最大型及最有價值的基建項目。有關機管局的管治架構、決策過程和營運管理的任何變更，必須經過審慎的評估和處理。

航空政策研究中心主任羅文鈺教授、副主任馮嘉耀教授和羅祥國博士，於上月十九日發表報告，回應政府將機管局私營化的諮詢文件。他們指出，在提出私營化之前，政府應採用較直接和

較少干擾的措施，來改善機管局管理層的效率。機管局上市不能顯著促進本地財金市場的多元化，但私營化後，機管局將要在香港整體經濟利益與股東財務利益之間取得平衡，若未能妥善處理，便可能對香港經濟造成長期損害。

他們建議政府如將機管局私營化，新公司的目標必須包括：（一）總體的服務素質，特別是航空服務的素質，不應比私營化前差；（二）總體的收費不應比私營化前高；（三）機場的總體表現亦不應比私營化前差。

羅文鈺教授表示，最好延遲機管局私營化，先改善其企業管治，並設立監管機制以確保機場和機管局不斷改進。

專科護士和治療師組成，直達全港各偏遠地方，長者可透過居所附近的明愛中心預約服務。
